## About Us

Canaport LNG is a state-of-the-art LNG receiving and regasification terminal in Saint John, NB and is the first LNG terminal in Canada, sending out natural gas to both Canadian and US markets.

Canaport LNG is a partnership between Repsol (75%) and Irving Oil (25%) with Canaport LNG as the developer, owner and operator of the terminal.

We have a maximum send out capacity of 1.2 billion cubic feet (BCF) or 28 million cubic metres of natural gas per day.

**Canaport LNG is able to supply 20% of the natural gas needs of the northeast US as well as Canadian needs.**

Liquefied natural gas (LNG) will arrive by ship to Saint John in specially designed LNG tankers and will be offloaded by being pumped through pipes into LNG storage tanks at the Canaport LNG terminal. The LNG will then be restored to its original gaseous form through a process called regasification. The natural gas is then distributed via the Brunswick Pipeline destined for use in as fuel for markets in Canada and the US. There it will be used for home heating and cooking, generating electricity as well as many other industrial purposes.

Canaport LNG is proud to bring safe, clean energy to our Saint John community and beyond. We understand our responsibilities to be a good citizen in our community and we are committed to being a good neighbor. We meet and exceed all safety and environmental regulations at municipal, provincial, federal and international levels to ensure the safety of our community.

## Who We Are

This document provides more information to help you learn more about Canaport LNG and the site of the new LNG Regasification terminal at Irving Canaport.
